PROFESSIONAL SUMMARY

Enterprise IT professional with extensive experience diagnosing complex infrastructure incidents, managing endpoint lifecycles, and engineering PowerShell automation to eliminate administrative overhead. Proven track record of rapid internal advancement, progressing from Service Desk intake to Tier II systems support in under a year.

Currently pursuing an accelerated Bachelor of Science in Software Engineering at Western Governors University, building native applications, containerized automation pipelines, and backend APIs across Rust, Python, Docker, and Ansible. Seeking to leverage systems troubleshooting, security analysis, and software development foundations in a Cloud, DevOps, Security or Software Engineering role.

TECHNICAL SKILLS

- **Languages:** Python, Rust, JavaScript, PowerShell, HTML5, CSS3
- **Cloud & Infrastructure:** AWS (EC2), Microsoft Azure, Cloudflare Workers & Assets, Docker, Ansible, Jinja2
- **Frameworks & Libraries:** FastAPI, Pydantic, React, Tauri, Vite
- **Enterprise Operations & Identity:** Active Directory, Microsoft Entra ID, Microsoft 365, SentinelOne, SolarWinds, ServiceNow
- **Developer Tooling & Workflows:** Git, GitHub, AntiGravity 2.0, Codex, VS Code, JetBrains IDEs, Wrangler

PROFESSIONAL EXPERIENCE

Amcor — *Oshkosh, WI*
IT Support Specialist II | *October 2024 – Present*

- **Delivered** Tier II infrastructure and endpoint support across 350 on-site personnel, scaling to 650 during peak manufacturing runs, diagnosing physical hardware, Windows operating systems, hybrid networking, and business application failures.
- **Partnered** directly with Information Security Operations to investigate endpoint alerts and compromise indicators, validating SentinelOne agent telemetry, collecting system triage artifacts, and isolating unauthorized executables to contain operational risks.
- **Orchestrated** quarterly endpoint deployment cycles for ~100 Windows workstations, standardizing image provisioning, user state migration, and peripheral connectivity to ensure predictable hardware transitions with zero unbudgeted manufacturing downtime.
- **Developed** modular PowerShell automation scripts to audit SentinelOne agent runtime health and automate diagnostic log collection, reducing repetitive triage steps and accelerating incident escalation to security teams.
- **Authored** comprehensive standard operating procedures and technical runbooks for hardware configuration and software remediation, standardizing diagnostic workflows and accelerating resolution times across the Tier II team.

Amcor / TEKsystems assignment | Oshkosh, WI

IT Service Desk Analyst | May 2023 - October 2024

TEKsystems contractor at Amcor: May 2023 - June 2024.
Permanent Amcor employee from June 17, 2024.

- Provided advanced first-contact technical support and systems triage for a distributed enterprise of approximately 5,000 employees, performing in-depth diagnostics across Windows endpoints, M365 services, and network access barriers prior to Tier II/III escalation.
- Administered Microsoft Entra ID privileged accounts, managing user lifecycles, role-based group assignments, and automated Multi-Factor Authentication (MFA) registrations to secure enterprise access boundaries.
- Configured enterprise collaboration environments in Microsoft 365 and Exchange Online, provisioning shared mailboxes, calendar permissions, and access delegations to resolve complex messaging authorization failures.
- Governed Active Directory domain infrastructure, auditing and modifying security groups that control access to critical applications (Workday), VPN gateways, and corporate network shares.
- Established a reputation as the Service Desk's go-to technician by resolving complex Tier II tickets, mentoring teammates, and taking ownership of difficult endpoint failures. Promoted to IT Support Specialist II within four months of becoming a permanent Amcor employee.

Mercury Marine — *Fond du Lac, WI*
Group Lead / Heat Treat Technician | *August 2016 – May 2023*

- **Led** shift operations and task distribution for a 10-person manufacturing team, diagnosing industrial hardware malfunctions and coordinating work order repairs with plant maintenance to maintain production uptime.
- **Implemented** workstation workflow improvements through a Lean Six Sigma Yellow Belt initiative, eliminating inefficient material handling and physical transit paths to optimize shift throughput and operator ergonomics.

TECHNICAL PROJECTS

Leakline | *Rust, Tauri, React*
Local-first desktop security scanner for detecting exposed secrets and configuration risks

- **Engineered** a local-first desktop security scanner in Rust, Tauri, and React, developing a native execution pipeline (`RuleFile` to `NativeScanner`) to perform recursive directory traversal and sensitive pattern matching without external runtime dependencies.
- **Refactored** the scanning architecture from an early monolithic structure into modular Rust components using AI orchestration tools (AntiGravity/Codex), validating traversal and rule logic in a companion CLI testbed prior to desktop GUI integration.

Infrastructure Automation Lab | *Ansible, Docker, Nginx, Jinja2, Linux*
Containerized configuration management and declarative state provisioning testbed

- **Architected** a local infrastructure configuration lab utilizing Ansible to manage an isolated Ubuntu Docker container, configuring an inventory with the Docker connection plugin (`ansible_connection=docker`) to eliminate SSH overhead during local testing.
- **Automated** end-to-end service deployment via Ansible modules (`apt`, `template`), managing repository cache updates, package installation, and custom Nginx endpoint configuration listening on port 8080.

Personal Portfolio Website | *HTML5, CSS3, JavaScript (ES Modules), Cloudflare Workers, Wrangler*
Live: cybersteveon.dev | *Repo:*
github.com/CyberSteveon/cybersteveon-portfolio

- **Architected** a multi-page, lightweight developer portfolio using semantic HTML5, modern CSS, and modular vanilla JavaScript (ES modules), implementing client-side routing, theme persistence, and active navigation state without third-party UI framework overhead.
- **Configured** serverless edge deployment using Cloudflare Workers and Assets with Wrangler, automating static asset distribution from the repository root to establish a reproducible, version-controlled hosting pipeline.

Windows Privacy & Setup Automation | *PowerShell, Windows Registry*
Repo:
github.com/CyberSteveon/windows-privacy-setup

- **Engineered** an automated Windows system-hardening script in PowerShell, disabling telemetry data collection services and modifying registry policies to eliminate tracking and establish a private, secure OS baseline.
- **Automated** post-installation machine setup by scripting unattended third-party software installations and debloating routines, reducing manual deployment overhead during fresh OS builds.

Personal Finance Dashboard | *Python, FastAPI, Pydantic, Apple Keychain*
Async self-hosted personal finance API with decoupled credential management

- **Architected** an asynchronous backend service using FastAPI and Python, structuring environment-driven application settings with Pydantic (BaseSettings) and configuring cross-origin resource sharing (CORS) to establish a modular API baseline.
- **Implemented** an isolated credential provider interface in Python, routing secret retrieval through native Apple Keychain CLI integrations to prevent local disk persistence and enable seamless provider swapping across environments.

EDUCATION

Western Governors University | *In Progress*
Bachelor of Science, Software Engineering (Accelerated B.S. → M.S. Pathway)
University of Wisconsin–Madison College of Engineering | *Completed February 2023*
Cybersecurity Bootcamp Certificate (Powered by ThriveDX)
